Appzad

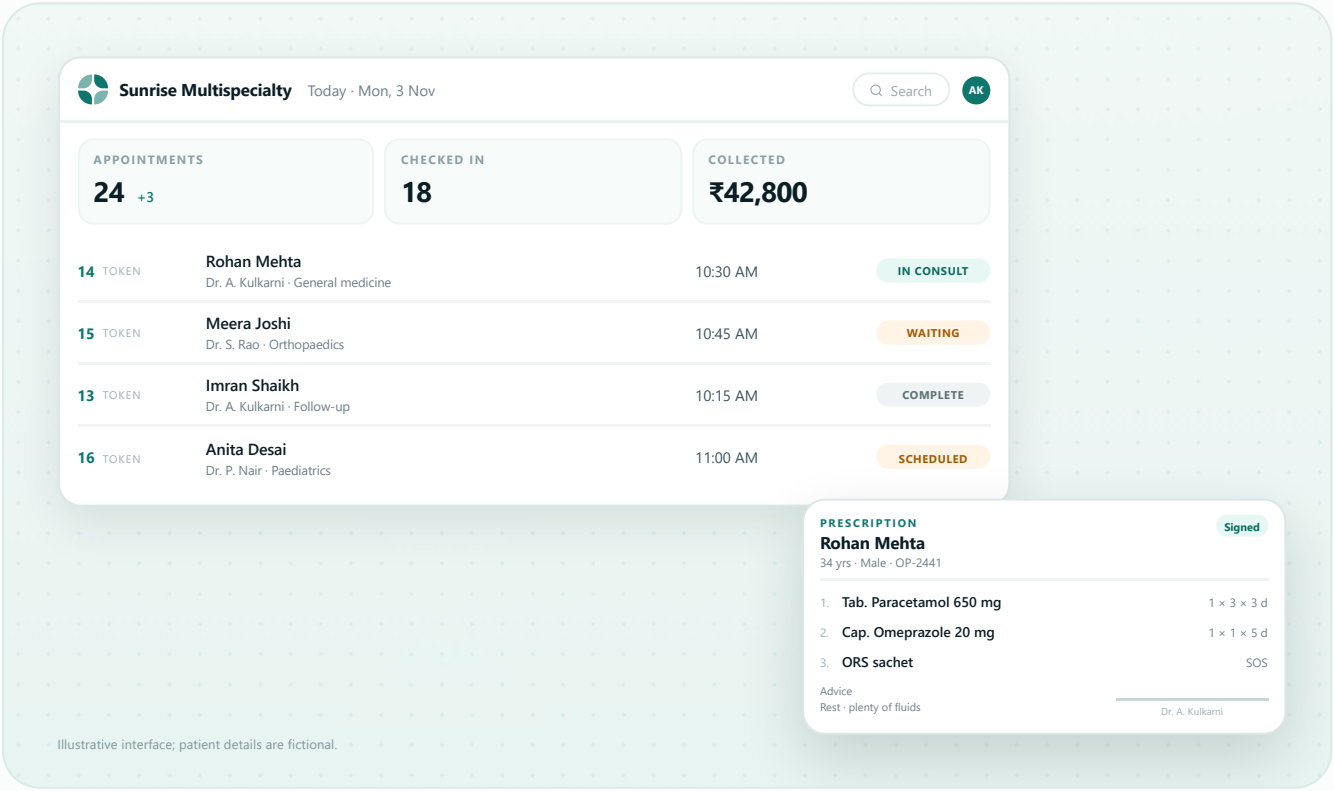

PRODUCT BROCHURE

HOSPITAL MANAGEMENT SYSTEM

Run the hospital. Not the paperwork.

Appointments, patient records, digital prescriptions, in-patient care, pharmacy, diagnostics and billing — one connected system for your whole team.

OPD & IPD · Pharmacy · Diagnostics · Billing · Roles & access

Illustrative interface; patient details are fictional.

Runs in your browser
Nothing to install. Open it on any desk.

Invite-only access
Only the people you invite can sign in.

Built for Indian hospitals
INR, GST, and a day that starts in India time.

01 THE OUT-PATIENT DAY

The out-patient day, without the gaps.

A patient books, arrives, sees the doctor and leaves with a prescription and a bill — without anyone re-typing a name, a fee or a diagnosis.

1 **Book**
Pick a doctor and an open slot. The booking gets a token number.

2 **Register**
One patient record, with a duplicate warning before you save.

3 **Visit**
Open the OP visit; vitals and the doctor's fee land on the bill.

4 **Prescribe**
Diagnosis, medicines and advice on screen, ready to print.

5 **Bill**
Take payment, print the invoice, and the visit closes.

AT THE FRONT DESK

Appointments
See a doctor's open slots, book a walk-in or a registered patient, and mark the visit complete, cancelled or no-show.

Patients
Guardian, emergency contact and insurance on one record. Find any patient by name or phone in seconds.

OP visits
Numbered visits with validity, vitals and the doctor's fee already in the bill. Search by date or payment mode.

IN THE CONSULTING ROOM

Digital prescription
Complaints, diagnosis, investigations, medicines and advice in one place — no handwriting to decipher at the pharmacy.

Printed your way
An A4 PDF on your letterhead, a blank sheet for handwritten prescriptions, or your own header image.

Order from the visit
Book lab tests and prescribe from pharmacy stock without writing a separate slip or asking the patient to repeat their details.

A DAY ON PAPER	A DAY IN APPZAD
A register at the desk, and a spreadsheet after it.	✓ One record, one visit number, one bill.
The same patient entered twice, under two spellings.	✓ A duplicate warning before the second record is saved.
The bill re-typed at the counter from the doctor's slip.	✓ The doctor's fee and the vitals are already on the bill.
Day-end totals added up by hand.	✓ Collections for any period, on the dashboard.

> "No double-booking. No re-typed patient. No bill rebuilt at the counter."
>
> THE OUT-PATIENT PROMISE

02 BEYOND THE OPD

The whole hospital, not just the front desk.

In-patients, pharmacy and diagnostics run on the same patient record — so a bed, a medicine and a lab report all point to the same person.

IN-PATIENTS

From admission to discharge

A bed, a doctor and a plan — tracked for the whole stay.

- Admit to a free bed, transfer beds, and see occupancy at a glance.
- Caretakers, medication schedules and health metrics through the stay.
- Discharge summary with the lab snapshot, printed on your letterhead.
- Insurance policy and claim status, kept on the admission.
- A final bill that carries advances, insurance and every charge.

PHARMACY

A counter that keeps up

Sell, receive and return — with stock that stays true.

- A keyboard-first sale counter with batch-wise stock and substitutes.
- Purchases, suppliers and purchase orders, with stock updated on receipt.
- Sell on account to an admitted patient and settle it later.
- Returns to suppliers and from patients, with credit notes.
- Expiry tiers, write-offs and discount schemes you control.

DIAGNOSTICS

From sample to signed report

Your tests, your ranges, your pathologist's name.

- Your test catalogue and packages, with your own prices.
- Bookings for walk-ins, OPD and in-patients; samples, labels and a worklist.
- Collect payment at booking, or settle it on the patient's account.
- Results with reference ranges, flags and pathologist verification.
- A4 reports printed or emailed, and each patient's trend over time.

ONE PATIENT, EVERY COUNTER

Register	OP visit	Pharmacy	Diagnostics	In-patient	Bill
one record	vitals & fee	stock & bills	samples & reports	bed & stay	one register

BILLING & COLLECTIONS

Every rupee, in one register.

OP, procedures, pharmacy, lab and in-patient bills meet in one place — so the day's collections reconcile without a second sheet.

GST where it applies
Procedure invoices with CGST and SGST shown on the bill.

Every module, one list
Filter the register by date, doctor, module or payment mode.

Cash, card, UPI, account
Take payment at the counter, or put it on an in-patient account.

Ready for your accountant
Export the matching bills as a clean PDF register.

03 CONTROL & CONFIDENCE

Your hospital. Your rules. Your records.

You decide who can see what, what prints on your letterhead, and who gets an invitation. Appzad stays out of the way.

Roles and permissions

Start from ready-made roles — administrator, doctor, nurse, receptionist, accountant, pharmacist and lab staff — then switch individual modules on or off for each one.

Your letterhead, your layout

Every printed document — prescription, invoice, admission report, discharge summary, lab report, bill and collections register — has its own template. Preview before you save.

Staff, without the admin

Invite by email, change a role, resend an invitation or deactivate someone who leaves. Only the people you invite can open your hospital.

Help inside the app

Raise a support ticket with a screenshot or PDF attached — without leaving the page you are on.

YOUR RECORDS STAY YOURS

Separate by design.

- Every hospital's data is kept apart. Staff of one hospital cannot open another's records.
- Sign-in is required on every screen, and access is by invitation only.
- Traffic is encrypted over HTTPS.
- Nightly encrypted backups keep your records recoverable.
- Permissions are checked by Appzad itself, not just hidden on screen.
- Prescription PDFs are generated when you download them, and not stored.

Your hospital's records belong to your hospital. We keep them that way.

FROM REQUEST TO FIRST PRESCRIPTION

Bring your team. We'll set up your hospital.

01
Write to us
Your hospital's name, city and number of doctors.

02
We set you up
Your hospital, your team's invitations, your letterhead.

03
Start the same day
Add doctors, invite staff, print a prescription.

Features shown are available in the current release.
